Product short description:

Thinking of turning your light source into a lamp? Then this silicone Fermaluce with built-in switch is the answer to all your problems! No need to tear down walls or go over electrical systems, just install it in any preexisting light source and control it with the simple on/off switch found in the lamp holder. Available in 12 colours and ready to light up every corner of your house with style.

Where should this lamp be used?

Thanks to the 8,8 cm diameter of the rose and to the joint designed to tilt the lamp holder up to 90° and rotate it by 315°, this wall lamp will easily adapt to any wall of your home, bringing a wave of colours (and light) to any room.

What are the advantages of silicone as a material?

Silicone has a wide range of advantages: it's long-lasting, soft, and pleasant to the touch. It also boasts a good resistance to high temperatures, chemical aggressions and oxidation. On top of that, it's light and has isolating properties: these features make this material extremely interesting for interior designers and customers alike.

What light bulbs should be used with this lamp?

The silicone Fermaluce lamp can be purchased with a Globe G95 milky light bulb, which seamlessly adapts to any room thanks to its timeless spherical shape. Otherwise we suggest you check our range of LED light bulbs with E26 fitting to find the one that best suits your needs and taste.

Product description:

The silicone Fermaluce lamp with joint and built-in switch is composed of:

Silicone rose with 88 mm diameter in selected finish
Silicone lamp holder with built-in switch E26 for exposed light bulbs in selected finish
